Developer with experience creating software solutions for Mindtree Ltd. Responsible for design, development and deployment of multiple web applications for local businesses during college years. I like to learn new technologies for fun and keep up with modern tools for different kinds of software development. Currently interested in improving both software skills and business ability.

Experience

Mindtree Ltd.
Oct 2019 - Present

Developed and maintained numerous software solutions using Java, Node.js, React, Angular, MySQL, Mongo, etc.
Some of which are:
- Developed numerous chatbots for different solutions in the internal team.
- Introduced role based user-query system in the chatbots to be used among teams.
- Developed a deployable ready-made template chatbot generator application.
- Multiple plugins for an existing automation application.
- Implemented a static report generator for an existing application.
- Designed and developed a visual testing application to get the visual defects between different environments.
- Maintained and introduced JIRA integration to existing application.

Personal Projects

Foldr
simple bookmark app

A bookmark website to manage all saved URLs across devices using React.

Portfolio
My personal projects website

A web app made using React to display some of the many projects.
